

Title	Summary
Personnel Change	Christine Katin replaced James Ricks as RPM.
Proposed Plan – Site 31	The Proposed Plan for Site 31, the Former South Storage Yard, was released on March 19. The existing and planned future use of the site was as an elementary schoolyard. Soil was the only contaminated medium at the site. COCs are benzo(a)pyrene, dioxins, and lead. The preferred alternative was complete removal and off-site disposal of contaminated soil from the debris areas. The 30-day public comment periods extends from June 25 to July 25, 2007.
Proposed Plan – Site 30	The Proposed Plan for Site 30, a day-care facility, was released on March 19. The Navy began investigating Site 30 in 2002 after a utility map was found identifying an old “trash dump” nearby. Soil was the only contaminated medium at the site. Dioxins are the only COCs. The preferred alternative was engineering controls combined with institutional controls. The 30-day public comment period ends on June 27, 2007.
Removal Action – Site 12	The Action Memorandum/Interim Remedial Action Plan for solid waste disposal areas (SWDA) was signed by Navy and the State of California (DTSC) on February 15, 2007. This was the fourth removal action to address COCs at Site 12 within the SWDAs. COCs were dioxins, lead, PCBs, PAHs, and methane. The removal action selected in the EE/CA (Oct 2006) was to excavate contaminated soil to a 4 foot depth and to dispose of the soil off site. The Removal Action Work Plan went final on February 26, 2007.
Remedial Investigation – Site 32	The draft RI for Site 32 was released for agency comment on October 23, 2006. The report recommends that the FS evaluate the risk associated with Aroclor-1260 to potential construction worker and residential receptors. At the time of the draft RI, Site 32 was mostly abandoned. Future designated reuse was “Residential/Open Space/Publicly Oriented Uses/Shoreline Open Space.” The release of the final RI was May 2007.
